

## Service-Information

Version 1 / 30.01.2023

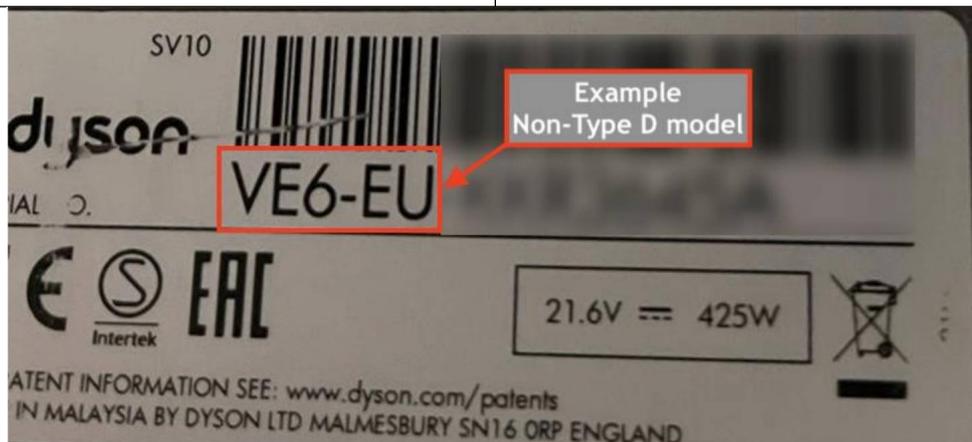

During production the manufacturer changed the main body and battery pack, therefore two different versions of the battery are in the field. The newer version is called "Type D".

According to manf. the newer main body/power pack are not retro-fit with the earlier main body/power pack.

**That means you can not use a Type D battery in the old main body!**

If you still have the original battery, please check the serial number to find out if you have a Type D or non-Type D model

Version	Serial Number begins with
Non-Type D (old version)	VE6-EU or RA5-UK
Type D	YH5-EU or YM8-UK

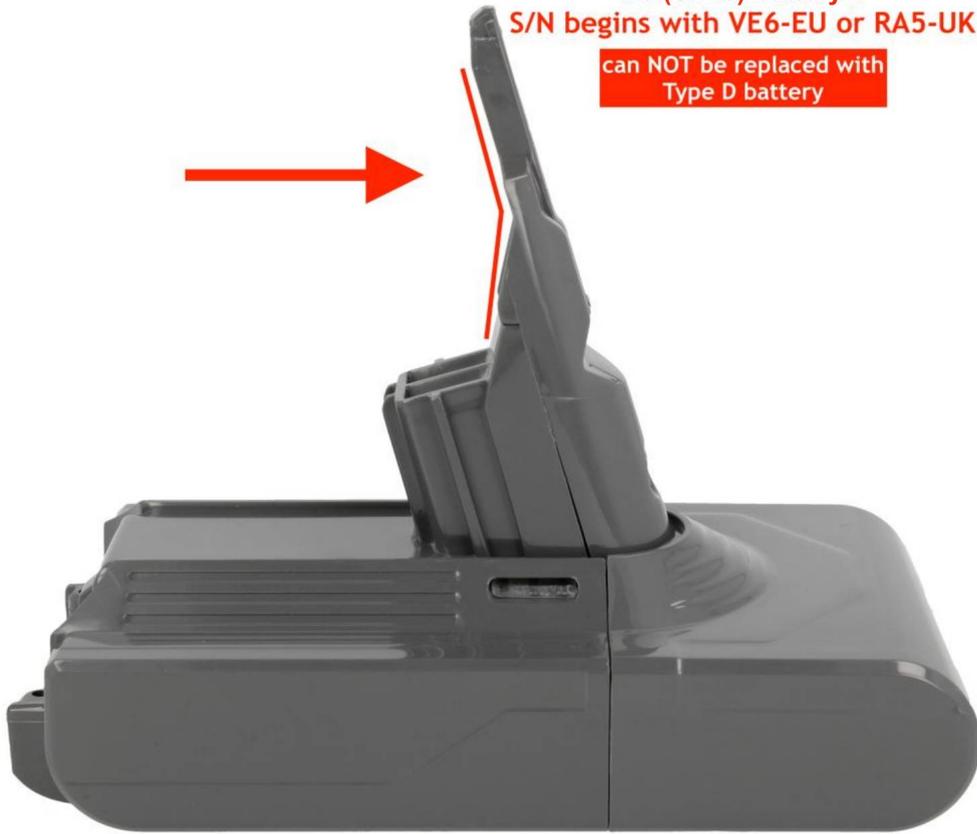

**Please scroll to page 2 to see a comparison between non-Type D and Type D battery**

REPLACE

V8 (SV10) battery  
S/N begins with VE6-EU or RA5-UK

can NOT be replaced with  
Type D battery

V8 (SV10) battery (Type D)  
S/N begins with YH5-EU or YM8-UK
